Nova AI Architectural Specification

Nova AI is an autonomous, context-aware personal operating assistant designed for local-first intelligence and Windows systems automation.

The core system combines an inference gateway powered by Qwen3 8B, deterministic tool validation via AST, and a native Win32 bridge operating on port 3001.

Component	Protocol	Port	Latency
Inference Engine	HTTP / SSE	8000	<800ms
Native Bridge	HTTP / Win32	3001	<5ms
Ollama Daemon	HTTP	11434	<40s
